Rain Guard Use

The Rain Guard is still in a field trial, any comments or suggestions are welcomed.

Carry an absorbent tissue with you on the range. Should the guard mesh get wet just lightly place the tissue against the screen material and it will absorb the water.

Do Not Push against the mesh.

If used properly the lens should not get any water on it's front surface. The mesh will allow natural drying of the unit, no need to remove and clean during a match.

Regular cleaning after a meeting is recommended.

Good shooting to you,

Scott Riles
